Helplines for childcare and senior citizens

2025

Introduction & Background

Formation of websites and future apps for attending to childcare and medical services along with senior citizens and allocation of old age homes in case of inhumane actions (reporting to officials if off-limits).
Here are the goals that have to be achieved once made

1. Providing serviced advice to people who reach out, available in both english and Hindi (can expand to more languages once set)
2. Reaching out to old age homes for senior citizens who contact (which is very unlikely, hence advertisements will help)
3. The provision of information related to services provided by the government that isnt noticed by many
4. Legal help if we do expand this project, and collect funds that go straight to multiple orphanages and senior houses.
5. More information about healthcare services for people who do not have definite guardians
6. Opportunities for people who want to visit and help children in need or senior citizens like group visits and entertainment events that either of us can do.

The objective of this website is to indirectly help people who are in need, and since it's very unlikely for them to contact us on their own accord, we can apply for direct advertisements or direct people who can reach out to children or seniors. On the other hand, we can provide as much information as we can for people who are interested in crowdfunding or assisting.

Guidelines and sublinks for the website

The following submission guidelines:

1. First and foremost, we would need an accessible way for people to reach out to us since they wouldn’t be aware of such foundations on the internet. Hence, we will

start by providing information and advice for legal and medical requirements rather than appointing people to help out children or seniors.

2.

3.

4.
